Dear Sirs:

Sept. 4, 1966

I wish to relate a report of an unidentified flying object.

As I went out onto my back porch I noticed the object appear in the western sky about 10:10 p.m. on Saturday, September 3, 1966. I first believed it to be a star, therefore I didn't call for others to see it. There was, however, something different about this object as compared to other celestial bodies surrounding it. It had a definite brilliance. I thought this might have been because the object was at a lower altitude.

I sighted the object off a tree branch, and accordingly, it did not seem to move. But, at approximately 10:18, it faded readily in a western position, away from where I was sitting.

Within approximately five seconds the area of the sky was completely clear of any

brilliant object, as before.

Later checks proved that no unidentified object was in the sky, only the other celestial bodies. Apparently there was little cloud cover in the area I was observing.

I thought you might want to keep this information on file in case other reports will be turned in. The object should have been seen around the Terre Haute area and nearby Illinois.

I would appreciate any answer or information you could give me concerning this sighting. I will be available for further information.

Sincerely,
